

November 10, 2023

In collaboration with

## **EXECUTIVE SUMMARY**

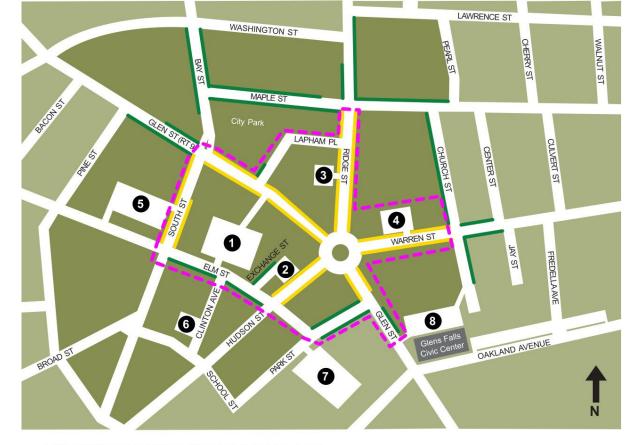

- Current parking demand does not justify investment in parking structure.
- 20% of parkers in core area park illegally beyond time limit (39% of parking hours).
- Stricter enforcement will redistribute parking demand towards outlying areas.
- City should pursue shared parking more aggressively, especially for new developments on City land.

#### **PAID PARKING**

- Very effective in generating parking turn-over
- Parking turn-over is more important for businesses than free parking
- Revenue source for potential deck financing
- Facilitates public-private partnerships monetizing parking resources

## **DOWNTOWN PARKING**

- Data Review\*
  - Core Parking Area
  - Outer Parking Area
- Key Findings
- Initial Recommendations

#### PARKING OCCUPANCY STUDY AREA

## **KEY TAKE-AWAYS**

- Significant reserves of vacant spaces available during peak times
  - 80 Spaces in the Core Parking area; 330 spaces in the Outer Parking Area
- Approximately 20% of parkers in core area park illegally beyond the allowed time limits. This affects about 39% of parking hours in these lots/streets.
  - Opportunity to redistribute longer-term parking from core area to outer area

### **PARKING MANAGEMENT**

- Stricter Enforcement
  - Consider hiring an additional PEO
  - Educate and communicate with the public Why enforcement is important.
    Parking turn-over is critical for local businesses.
    - Courtesy warnings
  - Upgrade enforcement of parking duration:
    - Via use of license plate readers (LPR)
    - Can sensor data be used to enforce parking? (Can the sensors alert PEOs of time violations? Can the session duration data be used to write citations?)

### PRICING AND PARKING REDISTRIBUTION

- Charge for parking in core area
  - i.e. Glen, Hudson and Ridge Streets; Elm St Lot and Exchange St Lot
    - 90%+ occupied during mid-day peak.
  - Increase turn-over and improve parking availability on high-demand streets
  - Use multi-space meters with capability to pay via cell phone app
- Enhance Park Street Garage Utilization
  - Free parking on upper floors
  - Improve public parking signage at street-level

Park St. Garage

### **SHARED PARKING**

- Maximize shared parking opportunities within new developments
  - Redevelopment on City-owned land that includes parking should allow some degree of public parking – i.e. South Street Lot site

#### **South Street Lot Example:**

- ❖ Today's Peak Parking Demand: 90 spaces
- ❖ Assuming a residential development of 80 apartments and 96 parking spaces (1.2 ratio)
- ❖ During day time +/- 50% of parking spaces will be vacant (48 vacant spaces)
  - ❖ Developer has to provide an additional 42 spaces to allow public parking for 90 cars during day time hours
  - Nobody gets an assigned parking space
  - Parking control based on permit system
- Investigate opportunities for publicly accessible shared parking in existing private facilities – i.e. upper floors of Clinton Ave. Garage

#### **WAYFINDING**

- Update the City's parking map to include the Park Street Garage
- Walking distance signage -- highlight parking locations with walk times
- Utilize a parking mobile app (i.e. Park Smarter) to help drivers find available spaces based on sensor data
