

SUPPORT H.R. 7945 – NITROUS OXIDE SAFETY ACT

"Once Marissa was transported from the scene, I began investigating the scene and taking evidentiary photographs using a Department issued camera. While investigating the scene, I determined the vehicle had been traveling north on Clarkson Road, crossed over the southbound lanes, exited the roadway, continued through a grassy area between the roadway and the parking lot of the business, struck a small tree, continued across the parking lot, struck a light pole located between the parking lot and the business, continued a short distance, struck Marissa, continued a short distance, struck the business, and came to rest with the front end of the vehicle partially inside the business. While I was photographing the scene, P.O. Godefroid, DSN 174, advised me one of the witnesses observed the driver removing items from the vehicle and throwing them into a wooded area behind the business. He described the items as bright green in color metal containers, similar to a CO2 cartridge."
